

Xerox Security Bulletin XR12-002

FreeFlow Print Server

Oracle January 2012 OS and Security Patch Cluster (includes Java 6 Update 29 Software)

v1.1

03/07/2012

Background

Oracle delivers quarterly Critical Patch Updates (CPU) to address US-CERT-announced Security vulnerabilities and deliver reliability improvements to the Solaris Operating System. Oracle no longer provides these patches to the general public, but Xerox is authorized to deliver them to Customers with active FreeFlow Print Server (FFPS) Support contracts (FSMA). Customers who may have an Oracle Support Contract for their non-FFPS Solaris Servers should not install patches that have not been customized by Xerox. Otherwise the FFPS software could be damaged and result in downtime and a lengthy re-installation service call.

This bulletin announces the availability of the following:

1. **Oracle January 2012 CPU OS and Security Patch Cluster**
 - ✓ This supersedes the Oracle October 2011 CPU Cluster
2. **Java 6 Update 29 Software**
 - ✓ This supersedes Java 6 Update 26 Software

The Security vulnerabilities that are remediated with this Oracle Security patch delivery are as follows:

CVE-2011-0419	CVE-2011-2139	CVE-2011-2428	CVE-2011-4542	CVE-2011-3544	CVE-2011-3554
CVE-2011-1928	CVE-2011-2140	CVE-2011-2429	CVE-2011-4543	CVE-2011-3545	CVE-2011-3556
CVE-2011-2107	CVE-2011-2204	CVE-2011-2430	CVE-2012-0094	CVE-2011-3546	CVE-2011-3557
CVE-2011-2110	CVE-2011-2414	CVE-2011-2444	CVE-2012-0096	CVE-2011-3547	CVE-2011-3558
CVE-2011-2130	CVE-2011-2415	CVE-2011-2526	CVE-2012-0098	CVE-2011-3548	CVE-2011-3560
CVE-2011-2134	CVE-2011-2416	CVE-2011-2896	CVE-2012-0099	CVE-2011-3549	CVE-2011-3561
CVE-2011-2135	CVE-2011-2417	CVE-2011-3190	CVE-2012-0100	CVE-2011-3550	
CVE-2011-2136	CVE-2011-2425	CVE-2011-4313	CVE-2012-0109	CVE-2011-3551	
CVE-2011-2137	CVE-2011-2426	CVE-2011-4540	CVE-2011-3516	CVE-2011-3552	
CVE-2011-2138	CVE-2011-2427	CVE-2011-4541	CVE-2011-3521	CVE-2011-3553	

Note: Xerox recommends that customers evaluate their security needs periodically and if they need Security patches to address the above CVE issues, schedule an activity with their Xerox Service team to install the Critical Patch Updates.

Applicability

These Security updates are intended for Xerox printer products running one of the FFPS 73.C0.41 or 73.B3.61 SPAR software releases. This Security patch update has only been tested on these software releases and it is recommended that they be installed on these FFPS software release versions. They have not been tested with the FFPS 73.B0.73 and 73.A3.31 software releases.

The Xerox CSE/Analyst is provided a tool (accessible from CFO Web site) that enables them to confirm the currently installed FFPS software release, Oracle Security Patch Cluster, and Java Software version. When this Security update has been installed on the FFPS system, this script will output the following:

```
FFPS Release Version: 7.0_SP-3 (73.C0.41.86)
Oracle Cluster:      January 2012
Java Version:       Java 6 Update 29
```

Patch Install Methods

The install of these Security patches must be performed by the Xerox Customer Service Engineer (CSE) or Analyst. The customer process to obtain this Security update is to call the Xerox support number to request the service.

Xerox strives to deliver these critical Security patch updates in a timely manner. They are available from the Xerox Support organization, and can be delivered electronically over the Internet to the FFPS system via a GUI tool called the FFPS Update Manager. The other method of delivery is from DVD/USB media. A more detailed description of the methods used by the CSE/Analyst to install the Security patches are as follows:

FFPS Update Manager GUI

Once the Security patches are ready for customer delivery they are made available from the Xerox Edge Host and Download servers. The CSE/Analyst uses the Update Manager GUI on the FFPS system to download and install the Security patches over the Internet. When the Xerox server is checked for updates from FFPS Update Manager, this Security patch update is listed as "Oracle January 2012 Security Patch Cluster (FFPS v7)".

This requires that the FFPS system be configured with the customer proxy information to gain Security patch update access from the Xerox servers. The connection is initiated by the FFPS system and the Xerox servers do not have access to the customer network. The Xerox server and FFPS system both authenticate each other before a data transfer can be successfully established between the two end points.

DVD/USB Media

Once the Security patch updates are ready for customer delivery they are made available on the CFO Web site. The CSE/Analyst can download and write the Security patch update on DVD/USB media. The will need access to either the DVD or USB device on the FFPS platform to install these Security patch updates.

Important: *The install of this Security patch update can fail if the archive file containing the patches is corrupted from file transfer or writing to DVD media. There have been reported install failures when the archive file written on DVD media was corrupt. The Security patch update could be corrupted when writing to media by particular DVD burn applications writing on some DVD media types. It is very important that the Security patch archive written onto the DVD install media be verified with the original archive file that was written to DVD.*

*The Security patch archive name is **Jan2012AndJava6U29Patches.zip**, and the archive written on DVD media can be verified against the original archive by the file size and/or check sum. The file size of the Security patch archive file as viewed from Windows Explorer is '1,583,914 Kb' and from a Solaris terminal window is '1,621,927,036 bytes'. The check sum can be obtained from a terminal window on the FFPS system by typing 'sum Jan2012AndJava6U29Patches.zip'. The check sum output should be '198133167827'.*
